

Quality Assistance Engineer

Products | San Jose, CA

Position Overview

Are you a Quality Assurance Engineer enjoys collaborating with engineers to incorporate quality at the source? Can you quickly identify high risk areas for quality issues and define test strategies and plans to mitigate those risks? Do you seek to continually learn about new approaches to quality and tools that enable quality development? If so, we are looking for you. As a Quality Assistance Engineer at Paradata you will partner with engineers, helping them develop strategies, plans and test so that they can deliver high quality code. You will master tools and educate your team members on how to use them to increase the quality of our software solutions.

What You Will Do

- Work with engineers to create strategies, plans and tests to drive quality at the source.
- Participate in code reviews.
- Leverage cutting edge and best in class tools to increase both efficiency and quality.
- Collaborate with other product team members to collectively increase the domain and development IQ of the team.
- Create and run automated tests for both back and front-end.

What We Are Looking For

- 5+ years of experience testing web applications.
 - Bachelor's Degree or higher in Computer Science or related field.
 - Strong understanding of technologies used to develop modern web applications.
 - Experience testing large scale data processing solutions.
 - Experience writing automated test suites.
 - Knowledge AWS, Travis, Github and other modern build and deployment tools.
 - Experience testing complex applications for the web.
 - Experience working in an Agile development environment.
-
