

Senior Software Engineer (Full Stack)

Products | San Jose, CA

Position Overview

Are you a Senior Software Engineer who is comfortable working across the full technology stack? Are you a craftsman who is passionate about delivering superior quality code? Do you seek to continually learn and develop your own coding skills and understanding of the tools and technologies that help you master your profession? If so, we are looking for you. As a Senior Software Engineer at Paradata, you will work within a small team of like-minded engineers striving to push the limits of their own capabilities while delivering exceptional SaaS solutions.

What You Will Do

- Work across the product stack.
- Leverage cutting edge and best in class tools, frameworks and technologies to deliver high quality products in an efficient manner.
- Collaborate with other product team members to collectively increase the domain and development IQ of the team.
- Deliver superior code providing quality at the source.

What We Are Looking For

- 5+ years of experience with a programming language (Java, Python, Ruby, etc...).
 - 5+ years of experience in web environments (Node, JavaScript, Angular, React, etc...).
 - Experience designing and working with database schemas (MySQL, PostgreSQL, MongoDB, etc...).
 - Knowledge of HTML, CSS, and JavaScript.
 - Bachelor's Degree or higher in Computer Science or related field.
 - Experience developing complex applications for the web.
 - Experience working in an Agile development environment.
-
